Josue- use the print statement and insert a string with the lyrics into the print statement
Coleman -For the purposes of this exercise, write print statements with a bunch of strings
Cassandra - Define "spirit of aggieland" , assign line to variables then insert those into a set
print statement
Jose - Assign variables for repeated words such as A=aggies

. BEFORE MOVING ON: Discuss as a team: Which one of the sets of instructions do you
consider the "best"? Why? Cassie has a simple but specific set of instructions
b. Did the instructions just include print statements? Yes
 Would it help to assign lines of text to a
Variable? Yes
 What variable type would this be? String
 Should the instructions include comments to
help a reviewer understand the intention of the developer? Yes
c. Note any process steps, instructions, that are repeated. Can you think of way to utilize a
repeated step again? Put repeated statements in separate variables

a. Which set of the four sequences of steps did you identify as being the best? Why?
        The most specific one that will be easiest to do but also easy to fix in case of error.
 b. In what ways were the sets of sequences that were produced different?
    -    Some were more veige than others
c. In what ways were the sets of sequences that were produced the same?
    -    They all assumed the usage of print statements
 d. This was a very open-ended question. What questions might you have asked to begin with in
order to better know how your sequential steps should have been written?
    -    How much coding experience they have.
